

## September 2008 Update

### CA Workload Automation Adapters for SAP Pass Integration Certification Testing with SAP BC-XBP 6.10 and BW-SCH 3.0

#### CA Workload Automation Business Agent for SAP r5.1 CA Workload Automation Adapter for SAP r3.2

---

#### Overview:

CA's advanced SAP certified Workload Automation solution provides businesses that run SAP assurance that workload processes dependent on SAP business applications can be integrated and managed with other workload external to the SAP environment. The adapter provides the capability for CA's Workload Automation solutions to seamlessly integrate into the job scheduling function within the SAP environment, providing workload management capability from any platform, mainframe or distributed, and to any platform.

The CA Workload Automation solution for SAP integrate any CA job scheduling engine with the SAP Computer Center Management System (CCMS) scheduler; providing the ability to schedule and combine SAP jobs with non-SAP jobs across any application and computing platform.

The solution has combined support for features critical for managing SAP scheduling and performance. Integration with SAP Event Management provides complete event driven job scheduling, allowing dynamic job execution based on business and IT events.

#### Features include:

- Advanced support for SAP XBP Interface
- Advanced support for SAP Business Warehouse (Info Package Support)
- Advanced support for SAP Process Chain
- Support for complex job dependencies across SAP and non-SAP applications
- Cross Platform coverage and support
- Event Management Integration

#### Business Value:

CA provides a single solution for automating workload needs across platforms and applications for businesses running SAP, as well as insight into the health, performance and optimization of the workloads that are managed within SAP. CA provides a solution to centralize and consolidate workload management environments to help customer's lower costs of operations and provide higher quality service.
