
CA Gen - IBM POWER6 Certification

- > IBM has stated in writing to CA that the POWER6 is 100% backward compatible with POWER5 based machines (i.e. that the IBM POWER5 -> POWER6 transition is equivalent to any Intel x86 architecture advancement)
- > The CA Gen product certification is to an architecture / operating system rather than to specific models of processors and given the IBM statement, we consider our certification performed on POWER5 to cover the POWER6 based machines
- > Based on the statements of IBM, CA Gen r7.6 is certified on IBM POWER6
