International Support

A translated product (also referred to as a localized product) is an internationalized product that includes local language support for the product's user interface, online help, and other documentation, as well as local language default settings for date, time, currency and number formats.

An internationalized product (also referred to as a language-certified product) is an English product that runs on local language versions of the supported operating system and required third-party products. Internationalized products support local language data for input and output, and also support the ability to specify local language conventions for date, time, currency and number formats.

CA Service Catalog r12.7 supports following languages:

Language	Internationalized	Localized
Japanese	Yes	Yes
German	Yes	Yes
French	Yes	Yes
Spanish	Yes	Yes
Brazilian Portuguese	Yes	Yes
Italian	Yes	Yes
Simplified Chinese	Yes	Yes

Note: On Windows platforms, the languages mentioned above must be fully localized regional releases of the supported Windows Server operating systems. In particular, Windows operating environments which utilize a Language Interface Pack or MUI running on an English core are not supported.

'Language Pack for CA Service Catalog r12.7 Release' (RO43250) needs to be used to Localize the product installation. See the Solutions and Patches page for the pre-requisite for the language pack.

Implementation Guide, Reference Guide, Integration Guide are not localized for all the languages, they are available in English only.
