12.6	RO71176	<pre> RO71176  M.C.S. ENTRIES  = ++PTF (RO71176)  STATIC LINK METALC RUNTIME FOR DISABLED CALLERS Problem Description: If the installation instructions were not followed then an abend0c4 could have occurred if the Metal C runtime is not fixed in memory.  This is because some of the Cloud Storage for System z code must run disabled and the Metal C runtime is by default in LPA which is pageable. Symptoms: Jobs hang and there may be dumps reported in IOS module IEAVSLIH. Impact: Jobs that hang must be cancelled and restarted. Circumvention: Fix the Metal C runtime module CCR3FCNS into memory by updating SYS1.PARMLIB member IEAFIXxx and re-ipl. This allows the sort program to allocate memory or work files as necessary.</p> <p>2. Logic added to LIST=BACKSTORE and REPORT=BACKSTORE so that volumes appear in sorted sequence. Currently the volumes appear in VVP sequence.</p> <p>Symptoms:</p> <p>1. The SVTSUTIL report shows error messages:        'SVTSU3016E SORTWK01 DD statement not found'        when sort work DDs are missing from the JCL when using the following commands:        LDS_DELETE, LIST=BACKSTORE,        REPORT=BACKSTORE, RECOVER=BACKSTORE</p> <p>2.
