Release	Service	Details
12.0	RO78448	<p>RO78448 M.C.S. ENTRIES = ++PTF (RO78448)</p> <p>L2B3INIT - MULTIPLE ENTRIES FOR IEFBR14</p> <p>PROBLEM DESCRIPTION: The CAS9 processing used by CA 7 can cause multiple entries in LPA for IEFBR14. The problem can occur using the GLOBAL DELETE option. This fix will prevent using the name of IEFBR14 in the GLOBAL DELETE process.</p> <p>Note that if a later CAS9 using GLOBAL REFRESH is done, then the IEFBR14 code used may get freed and reused, and thus cause system problems (possible various SOC4 abends). The IBM command SETPROG LPA can be used to "reload" the IEFBR14 module, so that an IPL will not be required. With this fix, no usage of the name IEFBR14 will be done, and even a subsequent GLOBAL REFRESH will not cause any problems.</p> <p>SYMPTOMS: Multiple entries for IEFBR14.</p> <p>IMPACT: High, if a GLOBAL REFRESH is done.</p> <p>CIRCUMVENTION: Do not do a GLOBAL REFRESH .</p> <p>PRODUCTS AFFECTED: CA 7 r11.3</p> <p>PRODUCT(S) AFFECTED: CA Workload Automation SE Release 11.3 CA Workload Automation SE Version 12.0</p> <p>Star Problem(s): 7 3417</p> <p>Copyright (C) 2015 CA.
