CA Endeavor Software Change Manager 16.0
CA RS 1503 - PTF RO77446 Details

Release	Service	Details
16.0	RO77446	<p>RO77446 M.C.S. ENTRIES = ++PTF (RO77446)</p> <p>ENPBIU00 BAD ARITHMETIC CONVER</p> <p>While working on a problem posed in CA Communities I found a few issues with the BPI utility ENPBIU00 (or Table Tool).</p> <p>1) When processing Package CSV data, ENPBIU00 fails with error message; +IRX0041I Error running ENPBIU00, line 672: Bad arithmetic conversion. This is caused by ENPBIU00 attempting to evaluate the CSV heading name "CA-7 SCHD DATE (ISO)" because it mis-interprets the minus ('-') as an arithmetic instruction. The fix (already available in development) is to translate the '-' in the heading name to '_' (underscore).</p> <p>2) When procesing CSV data that contains Date informatin in the format "YYYY/MM/DD" the Table Tool was incorrectly striping the slashes from the date field and replacing them with spaces - while not necessarily wrong, if makes date field data in a report harder to read. The fix in this case was to NOT translate the 'operator' characters - which in this case is OK, because the evaluation is performed inside delimiters which prevents Rexx from trying to perform arithmetic.</p> <p>3) Many CSV data fields are made unique by appending the field name with a unique suffix, typically enclosed in brackets; For example "ELM (S)" and "ELM (T)" for a Source and Target version of the Element name (e.g. in the Package Action CSV data). Table Tool must convert the "text" name into a valid Rexx variable name and it does this by replacing spaces, Minus, etc. with underscore, however only the opening bracket '(' was beign converted to '@' and the closing bracket ')' was being replaced with space resulting in the resolved name being; ELM_@S. Again while this 'works' it's not consistent or easily guessable so the recommendation is to replace both brackets with '@' to make the fields more readable;</p> <p>Examples of correctly expanded CSV variables include;</p> <p>-----</p> <p>EXEC_END_DATE_@ISO@ EXEC_END_TIME_@ISO@ CA_7_SCHD_DATE_@ISO@</p> <p>Testcase created in 'bst.techsupp.bugs(p7163)'</p> <p>Note: The BPI was a new feature in V16, so there is no need to float this PTF to any lower release, but it should be floated (when published) to V17</p> <p>Star Problem(s):</p> <p>ENDBAS 7163</p> <p>Copyright (C) 2015 CA.
