CA RS 1506 - PTF RO79189 Details

Release	Service	Details
15.0	RO79189	<pre> RO79189  M.C.S. ENTRIES  = ++PTF (RO79189)  ACFRPTSL REPORT SHOWS INVALID DATE FOR PSWALTOD FIELD PROBLEM DESCRIPTION: The PSWALTOD field displays invalid dates in the output from the ACFRPTSL report. PSWALTOD is a new field that was added for the AES1 encryption support. It is suppose to contain the date and time when the password was last changed with the AES1 encryption method. This new field is at the same location in the logonid as the old field called 'LIDMUOPT' which was used by the IDMS interface. If this old field was used by a site or has blanks in it, the new field will be displayed with a bad date. This fix will display a zero date and time for the PSWALTOD if it is not a valid date and time for an AES1 encryption. SYMPTOMS: The PSWALTOD field is displayed with an invalid date. IMPACT: Does not impact the system in any way. Every time we attempt to use the field we check to see if it is valid. CIRCUMVENTION: None PRODUCT(S) AFFECTED: CA-ACF2-MVS Related Problem: ACF2MS 9748 Copyright (C) 2015 CA. All rights reserved. CA RS 1506 - PTF RO79687 Details

Release	Service	Details
15.0	RO79687	<p>RO79687 M.C.S. ENTRIES = ++PTF (RO79687)</p> <p>CICS: DFHXS0001 ON SECP ABEND PASSWORD VERIFY ESCAPE/FAILURE            PROBLEM DESCRIPTION:            ACF2 CICS may perform password validation at any of the following:            1) Resource Access Validation (if rule indicates VERIFY)            2) Terminal I/O (when INACT=PROMPT and user's IDLE time exceeded)            3) On request via API call.</p> <p>If the verification fails or the user chooses to escape from it, the terminal is signed off and a transaction abend is issued. With ACF2PARM OPTION ABCODE=SEC, the abend code is SECP. Not all CICS/TS (CTS) environments respond well to the abend being issued at that specific time. If a SECP is issued in case (1) above, a DFHXS0001 abend will be issued by CICS, and an SVC dump taken. In some cases there may also be subsequent program checks during recovery of the SECP abend.</p> <p>SYMPTOMS:            DFHXS0001 ssssss An abend (code ---/SECP) has occurred at offset X'FFFF' in module DFHXSRC.</p> <p>IMPACT:            SVC Dump associated overhead</p> <p>CIRCUMVENTION:            None</p> <p>Related Problem:            ACF2MS 9719</p> <p>Copyright (C) 2015 CA.
