15.0	RO80503	<pre> RO80503 M.C.S. ENTRIES = ++PTF (RO80503) CFILE RECORD ID 4520 & 4540 PROBLEM DESCRIPTION: The TSSCFILE output for record #'s 4520 and 4540 repeats the ACID name of the first record. The repeating is done in column 15. This only happens when records 4520 or 4540 are printed out one after another. This can occur running the following commands in TSSCFILE: TSS LIST(ACIDS) DIGICERT(ALL)for 4520 TSS LIST(ACIDS) KEYSRING(ALL) for 4540 SYMPTOMS: When running CFILE for record 4520 or 4540, starting from position 15, the ACID name of the first entry repeats instead of refreshing the record. IMPACT: Cosmetic only. The ACID related to the record does get printed in the position where it is supposed to be.
