CA Jobtrac Job Management 11.0
CA RS 1610 - PTF RO92053 Details

Release	Service	Details
11.0	RO92053	<p>RO92053 M.C.S. ENTRIES = ++PTF (RO92053)</p> <p>SPACE COMMAND SHOWS TRUNCATED CYLS FOR EAV VOLUME</p> <p>PROBLEM DESCRIPTION:</p> <p>The Jobtrac Space command shows "9999" total free cylinders for EAV volumes when there are actually more total free cylinders. The LSPACE XEXPMSG option is now used to obtain a 9 byte free cylinder value to display on the "DASD selection List" ISPF screen.</p> <p>Likewise, the Jobtrac Status command is now updated to show the 9 byte free cylinder value. The Status command now shows the last volume for multi-volume Datacom files. The last volume is where new extents will be obtained when expanding the Datacom file. A S113 ABEND could occur when an EAV volume is selected from the Space command DASD list. The VTOC Read routine now uses a DCBE with EADSCB=OK to avoid this ABEND.</p> <p>Prior to this PTF, the IXX was not reported on the Jobtrac Status ISPF menu nor was it checked by the Jobtrac Started task space monitor function.</p> <p>Please see the hold data for new messages.</p> <p>SYMPTOMS:</p> <p>The Space and Status commands were not showing the full free cylinder values for EAV volumes.</p> <p>IMPACT:</p> <p>Users of the Space and Status commands.</p> <p>CIRCUMVENTION:</p> <p>Use other system functions like ISPF 3.4 to display information on datasets.</p> <p>PRODUCT(S) AFFECTED:</p> <p>CA-Jobtrac Release 11.0</p> <p>Related Problem:</p> <p>JOBTRC 1469</p> <p>Copyright (C) 2016 CA.
