According to the documentation a library, sequential file or PDS can be used for such DD statement. However when using a library or PDS, an error message C1G0233E is issued and the action processing is ceased.  CA RS 1610 - PTF RO92117 Details

Release	Service	Details
17.0	RO92117	<p>RO92117 M.C.S. ENTRIES = ++PTF (RO92117)</p> <p>PRINT ELEMENT TO TARGET PDS MAY ACT INCORRECTLY</p> <p>PROBLEM DESCRIPTION:</p> <p>There could be several output types used for the batch PRINT ELEMENT action. One of those types is DDNAME. JCL DD statements matching used DDNAMEs can be used with sequential data sets or PDS libraries with a member specified in parenthesis.</p> <p>In case of using multiple DDNAMEs for multiple PRINT ELEMENT actions within one job step and using the same PDS library for these DDNAMEs no matter if the same or different members are coded as part of the DSN parameter, the action will ABEND with S213-30 if DISP=SHR is used. If DISP=OLD/MOD is used, all members created in the output library are overlaid with the content of the last print action of particular job step. This is a bug.</p> <p>Note:</p> <p>The problem affects only PDS libraries. PDSE libraries work fine.</p> <p>SYMPTOMS:</p> <p>DISP=SHR => S213-30 ABEND.</p> <p>DISP=OLD => all members created by print actions during one JCL step are overlaid by the content of the last print action for that PDS.</p> <p>The PDS directory is broken, multiple members have the same TTR.</p> <p>IMPACT:</p> <p>Unable to make print element request to PDS data set.</p> <p>CIRCUMVENTION:</p> <p>None.</p> <p>PRODUCT(S) AFFECTED:</p> <p>CA Endeavor SCM Version 17.0</p> <p>CA Endeavor SCM Version 18.0</p> <p>Related Problem:</p> <p>ENDBAS 7348</p> <p>Copyright (C) 2016 CA.
